

The Best Bike Phone Mount

Using a smartphone mount while biking is a boon for anyone who wants easy access to their device. But with phone price tags approaching—and topping—the \$1,000 mark, you want to be sure your device will stay firmly attached. After riding with 23 smartphone bike mounts over 90 miles' worth of smooth and rough roads, we conclude that the [Quad Lock mounts](#) the ones we'd use for our own phones.

Budget pick

[Nite Ize Wraptor](#)

No-tool installation

Although not as rock solid as the Quad Lock system, this mount held phones the most securely of any silicone-strap models we tested, and it should be just fine for occasional use or for bike-share riders.

[\\$16 from Home Depot](#)

The [Nite Ize Wraptor](#) provides a simple, well-designed solution for riders who want to be able to mount their phone on their own bike or a bike-share bike, and who generally ride on smooth, paved roads. The silicone straps that attach phone to mount and mount to bike feel much sturdier than those of other, similar mounts. Because of the stretchy nature of silicone, we did find our test phones would vibrate in the Wraptor more than they did in the pricier Quad Lock mounts when we rode on rough terrain, but it was nothing like the rattling we witnessed with other silicone mounts and even some case-based mounts. The Wraptor fits handlebars of all sizes and is a cinch to install and remove. Likewise, the straps fit phones of all sizes, and they don't get in the way of the phone's screen or buttons—a problem we had with other silicone mounts. You can also easily rotate the phone from portrait to landscape (and vice versa) even as you pedal. The entire mount is small enough to tuck into a pocket when not in use.
