## 6 best iPhone car mounts: Nite Ize Steelie

As smartphone technology and 4G coverage improves, more of us are using our iPhones for in-car GPS rather than investing in separate dedicated devices. Adoption of Apple's [CarPlay](#) is yet to take off, so for now you're going to need a decent mount to allow your iPhone to be easily viewable on your dashboard to guide you to your destination. Here are six of the best available. See also: [14 weirdest iPhone cases](#)

### Nite Ize Steelie

RRP £24.95

[Get it from Amazon](#)

The Steelie is a cool minimalist mount, but it does require you to attach a small circular magnet directly to the back of your iPhone or to a hard iPhone case. If you're happy to do so, then Steelie could be for you.

That magnet (which is super-strong, by the way) connects to the Steelie Ball Mount Component, which can be attached to your dashboard, so all you need to do is place your iPhone on the Ball Mount to begin using it hands-free. As it's a ball mount, you'll be able to easily reposition your iPhone in any way you choose to.
